COMMENTS

The total number of logos remained stable with a **1% growth**. This was driven by a **30% MoM increase** in recovered logos, which also kept **churn rate** in 3.8%

Core ARR: ARR remained steady, primarily due to **Recovered Logos (+31%) and lower downsell (-25% MoM) impact**. Churn increased by **8%** due to a higher number of disconnections. ARR also remained stable due to an increase in upsells and a decrease in downsells

COMMENTS

Total logos decreased by -**1%**. This decline was driven by a nearly **20% drop in recovered customers** and a **5% increase in churn.**

The **1% decrease in ARR** can be attributed to lower revenue from new logos, increased churn, and fewer upsells. Nevertheless, the decline was partially offset by a **reduction in downsell** during February

Although we have fewer churned logos and a higher number of reactivations YTD, the low volume of new logos and reclassifications leave us at -4% YTD

COMMENTS

In February, 36 new accounts were activated—the highest number in Alanube's history—driving a **38% increase in ARR**.

This ARR growth **has the potential to be even higher**, as only 5 of these 36 accounts have started issuing documents while the rest are currently **paying the minimum fee**. Therefore, we expect a significant revenue uplift in the coming months as these accounts become fully active
