COMMENTS

Year-over-year growth in acquisition: both Core and Lite in January and February 2026 show higher volumes compared to the same months in 2025, demonstrating a stronger ability to generate new logos, particularly driven by Colombia; however, although S&M is more efficient vs 2025, the increase in February vs January 2026 reflects a higher dependency on investment to sustain growth, suggesting opportunities to improve efficiency and optimize CAC.

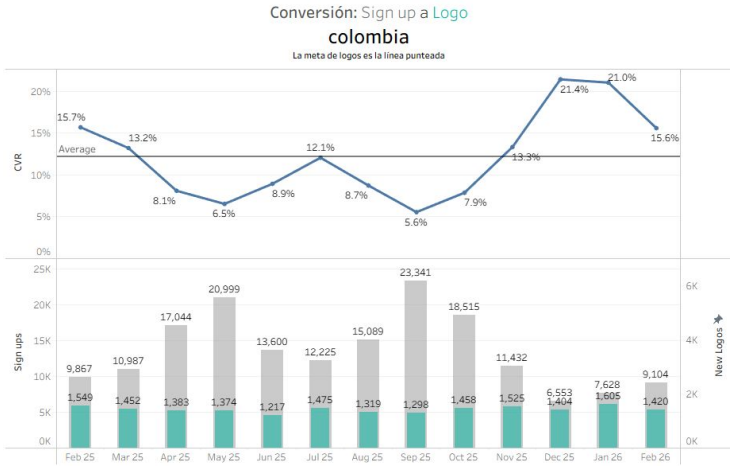
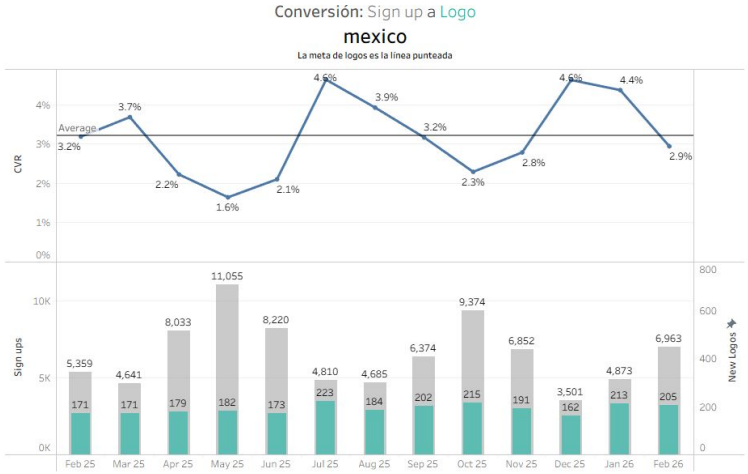
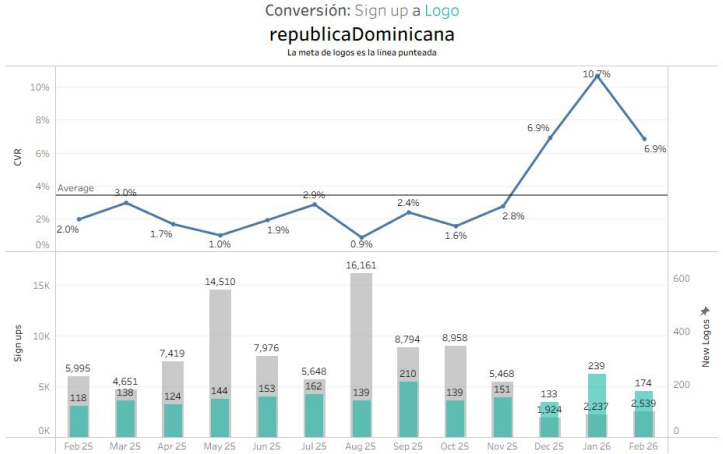
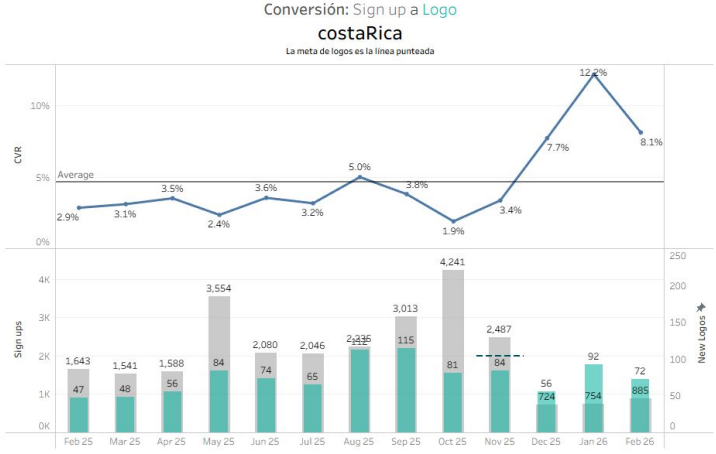
Acquisition Funnel: conversion signups to Logo

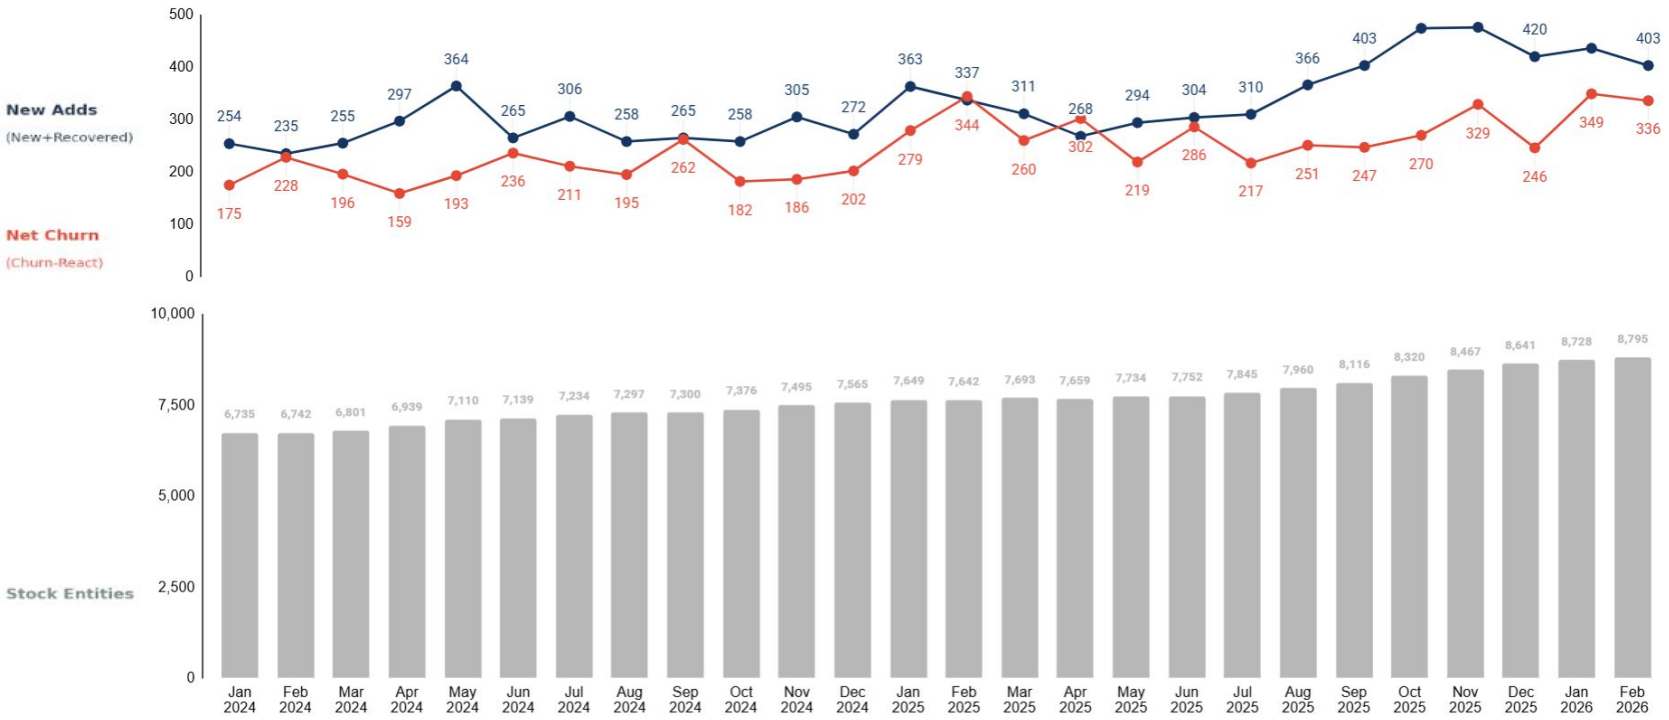








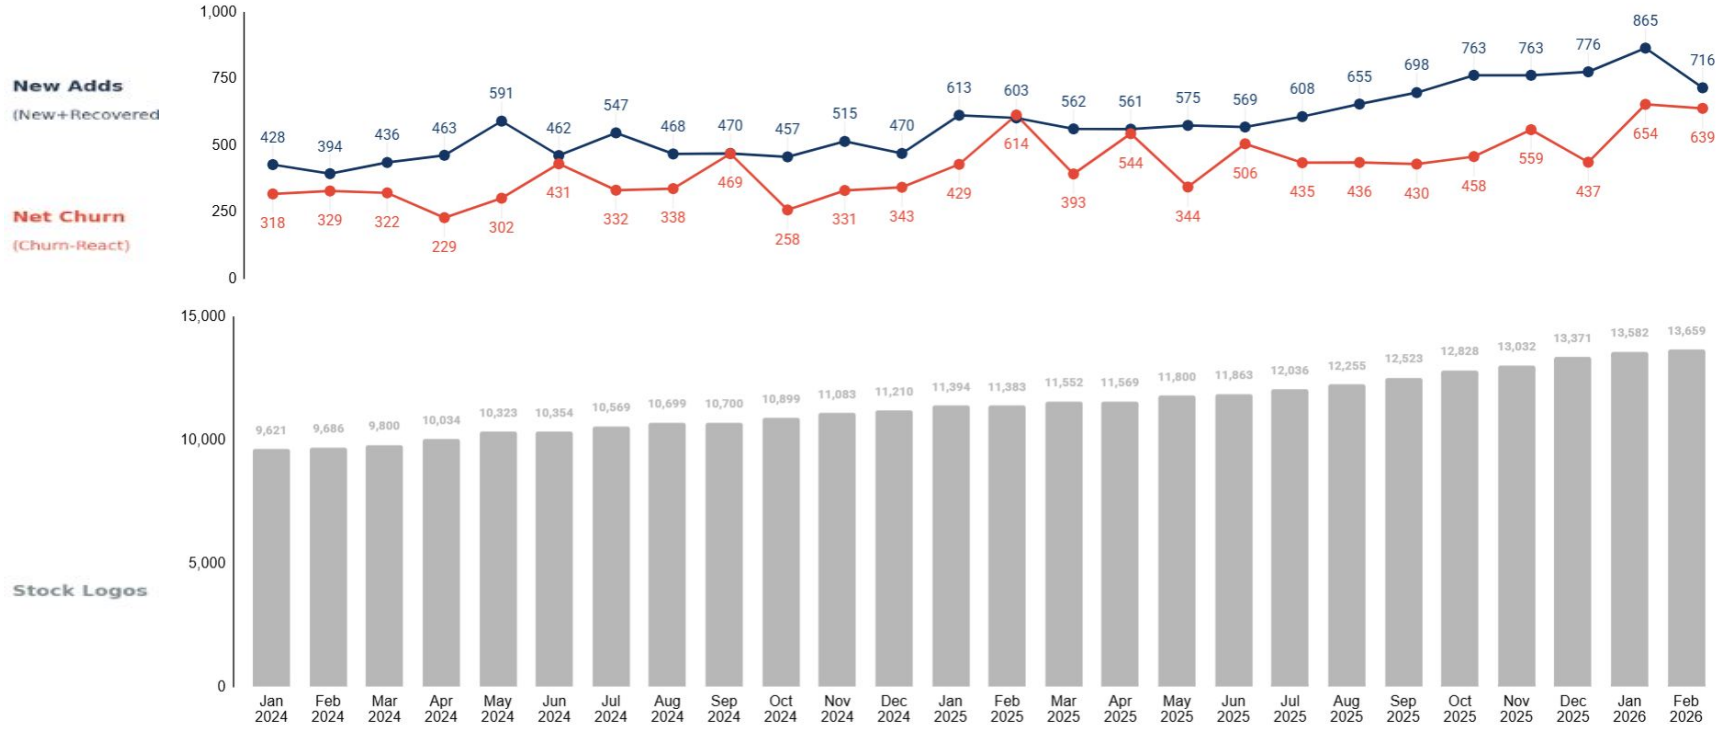
Accountant Flywheel



COMMENTS

- **Critical Net Growth:** In February, **403 new adds** were nearly offset by **336 churns**, leaving a net balance of only **67 accountants**, the narrowest margin in the last six months.
- **Near-Record Churn:** With **336 cancellations**, February ranks as the **third-highest month for churn** in history, signaling a critical challenge in retaining this specific segment.
- **Stagnating Stock:** Despite reaching a record **8,795 entities**, the growth curve has flattened significantly as new acquisitions fail to outpace the high cancellation rate.

Accountant Flywheel



COMMENTS

- **Net Deceleration:** February's **716 new adds** barely offset **639 churns**, resulting in a net growth of only **77 logos**—the narrowest margin in the last six months.
- **Retention Pressure: Net Churn (639)** hit its second-highest historical peak, indicating increasing difficulty in retaining customers as the total stock grows.
- **Inertial Growth: Stock Logos** reached a record **13,659**, but the growth curve is flattening compared to previous months due to the high cancellation rate.
