This report introduces our **new standardized NPS framework**. Starting this month, this dashboard will be tracked and presented on a **month-over-month basis** to measure the impact of our strategic interventions and ensure continuous improvement.

**Key Insights:**

- **Operational Friction:** Users report slow response times and significant difficulty reaching live agents.
- **System Reliability:** Technical instabilities in core modules (invoicing and inventory) are affecting customer business continuity.
- **Pricing perception:** Price sensitivity suggest that users are questioning if the current feature set justifies premium plan.
- **UX Bottlenecks:** Low intuitiveness and high manual data entry requirements are cited as primary barriers to daily active usage and platform stickiness.
- **CRI Version:** Costa Rica is the only 4x4 version performing below the "Excellent" threshold. This is driven by acute dissatisfaction with support quality and friction in API pricing.
